No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel isolated variant allele of human kappa opioid receptor gene, useful

```
The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (hKOR) sequence appearing as ADN0505, where the variation comprises C852T, C948T, C1008T or their combinations. Also included are comprises C852T, C948T, C1008T or their combinations. Also included are a isolated mucleic acid molecule selectively hybridising to the variant, as conject comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial test kit for determining the presence of at least one variation in a hKOR can allele in a bodily sample taken from a subject. The hKOR variant allele is useful for determining a susceptibility in a subject to at least one physiological response, condition or disease related to the endogenous opioid system, nociception, neurotransmitter release endogenous opioid system, learning, memory, cognition, pain, cocaine, camphetamine and other stimulants self-administration, behavioural sensitisation to cocaine, opiates, alcohol and tobacco, opiate, amphetamine and alcohol withdrawal, physical dependence and tolerance; controlled function, reproductive function, prolactin regulation, stress responsivity, physiology and pathology of mood and affect, immune function, gastrointestinal function. The hKOR variant allele is useful for determining a therapeutically effective amount of pain in a subject and is useful for determining a therapeutically effective amount of therapeutically effective amount of therapeutic agent to administer to a subject in order to induce analgesia in the subject. The mount of therapeutic agent to administer to a subject and is setul for determining a therapeutic agent to administer to a subject and is setul for determining a therapeutic agent to administer to a subject and is setul for the more addictive disea
for determining susceptibility in subject to physiological response, condition or disease related to endogenous opioid system.
                                                                                                   Example, SEQ ID NO 2, 29pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene for hKOR is located the C852T allele of hKOR

the inventorior states to an isolate and states of a numban Kappa opioid receptor gene, comparising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid creceptor (hKOR) sequence appearing as ADN30505, where the variation comparises CB52T, C948T, C1008T or their combinations. Also included are an isolated nucleic acid molecule selectively hybridising to the variant, and an origin of replication, an expression vector comprising the variant and an origin of replication, and carporation vector comprising the variant and an origin of replication, and expression vector comprising the presence of at least one variation in a hKOR constraint allele in a bodily sample taken from a subject. The hKOR contraint allele is useful for determining a susceptibility in a subject to at least one physiological response, condition or disease related to the condogenous opioid system, nociception, neurotransmitter release endogenous opioid system, nectoring memory, cognition, pain, cocaine, amphetamine and other stimulants self-administration, behavioural condogenous opioid system, learning, memory, cognition, pain, cocaine, amphetamine and alcohol withdrawal, physical dependence and tolerance; cuross responsivity, physiology and pathology of mocd and affect, immune truction, gastrointestinal function. The hKOR variant allele is useful for determining a therapeutically effective amount of tharming a busecptibility to pain in a subject and is useful for determining a therapeutically effective amount of therapeutically effective amount of therapeutically effective administer to a subject in order to induce analgesia in the subject. The hKOR variant allele is useful for determining a therapeutic agent to administer to a subject to administer to a subject in order to induce analgesia in the subject me addictive disease to treat the at least one addictive dise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful

The method comprises a sequence encoding an oppioid receptor and a vector backbone. Also described: (1) a cell comprising the vector or its integrated product; (2) an animal comprising the cell; and (6) an animal produced by the process of administering the vector to the animal produced by the process of administering the vector to the animal. The vector has analgesic activity, and can be used in gene therapy. The vector is useful in preparing a composition for reducing pain in a subject. The present sequence encodes the human kappa opioid receptor, which is used in the exemplification of the present invention. The human kappa opioid receptor gene is located on chromosome 8, more specifically to 8411-12.

ADN3051
```

The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (DKOR) sequence appearance and an analyse and solated nucleic acid molecule selectively hybridising to the variation an isolated nucleic acid molecule selectively hybridising to the variant, a cloning vector comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial test kit for determining the presence of a least one variation in a hKOR gene of an allele in abdily sample taken from a subject. The hKCR variant allele is useful for determining a succeptibility in a subject to an a least not proport response, condition or disease related to the at least one physiological response, condition or disease related to tendogenous opioid system, nociception, neurotransmitter release endogenous opioid system, learning, memory, cognition, pain, cocaine, amphetamine and other stimulants self-administration, behavioural sensitisation to cocaine, anopates, alcohol and tobacco, opiate, amphetamine and alcohol withdrawal, physical dependence and tolerance, neuroendocrine function, reproductive function, prolactin regulation, ID NO 6; 29pp; English. Example; SEQ

useful

```
stress responsivity, physiology and pathology of mood and affect, immune function, gastrointestinal function. The hKOR variant allele is useful for determining a susceptibility to pain in a subject and is useful for adetermining a therapeutically effective amount of pain reliever to administer to a subject in order to induce analgesia in the subject. The hKOR variant allele is useful for determining a therapeutically effective amount of therapeutic agent to administer to a subject suffering from at least one addictive disease to treat the at least one addictive disease. The gene for hKOR is located on chromosome 8q11.2. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300

opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (hKOR) sequence appearing as ADN30505, where the variation comprises C852T, C94GT, C1008T or their combinations. Also included are an isolated nucleic acid molecule selectively hybridising to the variant, expression vector comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial test kit for determining the presence of at least one variation in a hKOR gene of an allele in a bodily sample taken from a subject. The hKOR variant allele is useful for determining a susceptibility in a subject to at least one physiological response, condition or disease related to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      endogenous opioid system, neception, neurotransmitter release endogenous opioid system, learning, memory, cognition, pain, cocaine, ampheramine and other stimulants self-administration, behavioural sensitisation to cocaine, opiates, alcohol and tobacco, opiate, ampheramine and alcohol withdrawal, physical dependence and tolerance; neuroendocrine function, reproductive function, prolactin regulation, stress responsivity, physiology and pathology of mood and affect, immune function, gastrointestinal function. The hKOR variant allele is useful for determining a therapeutically effective amount of pain reliever to administer to a subject in order to induce analgesia in the subject. The hKOR variant allele is useful for determining a therapeutically effective amount of pain reliever to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360

```

The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (MCOR) sequence appearing as ADN30505, where the variation comprises C8527, C948T, C1008T or their combinations. Also included are a isolated mucleic acid molecule selectively hybridising to the variant, an expression vector comprising the variant and an origin of replication, an expression vector comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a cloning vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial cest kit for determining the presence of at least one variation in a hKOR gene of an allele in useful for determining a susceptibility in a subject to at least one physiological response, condition or disease related to the endogenous opioid system, learning, memory, cognition, pain, occaine, camphetamine and other stimulants self-administration, pain, occaine, camphetamine and alcohol withdrawal, physical dependence and tolerance; sensitisation to cocaine, opiates, alcohol and tobacco, opiate, amphetamine and alcohol withdrawal, physical dependence and tolerance; consisting the unction, productive function, productive function, productine function, pastrointestinal function. The hKOR variant allele is useful for determining a therapeutically effective amount of pain reliever to a subject in order to induce analgesia in the subject. The KKOR variant allele is useful for amount of therapeutic agent to administer to a subject suffering from an endiative agent to administer to a subject to are treat the at least one additive disease.

The constant allele is useful for treat the at least one additive wing from an endiative agent. Novel isolated variant allele of human kappa opioid receptor gene, useful for determining susceptibility in subject to physiological response, condition or disease related to endogenous opioid system. is located on chromosome 8q11.2. The present sequence Human; kappa opioid receptor; hKOR; ss; gene; SNP; single nucleotide polymorphism; endogenous opioid system; nociception; neurotransmitter release; learning; memory; cognition; pain; cocaine; amphetamine; alcohol; tobacco; opiate; withdrawal; neuroendocrine function; reproductive function; prolactin regulation; stress responsivity; mood; affect; immune function; accounting gastrointestinal function; analgesia; additive disease; /standard name= "Single nucleotide polymorphism" Example; SEQ ID NO 7; 29pp; English. ```
The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (hKDR) sequence appearing as ADN30505, where the variation comprises C852T, C948T, C1008T or their combinations. Also included are nisolated nucleic acid molecule selectively hybridising to the variant, and expression vector comprising the variant and an origin of replication, an expression vector comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial cet est kit for determining the presence of at least one variation in a hKOR yariant allele in a bodily sample taken from a subject to at least one physiological response, condition or disease related to the endogenous opioid system, nociception, neurotransmitter release
cendogenous opioid system, learning, memory, cognition, pain, cocaine, amphetamine and other stimulants self-administration, behavioural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated variant allele of human kappa opioid receptor gene, u for determining susceptibility in subject to physiological response, condition or disease related to endogenous opioid system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example; SEQ ID NO 5; 29pp; English.

sensitisation to cocaine, opiates, alcohol and tobacco, opiate, amphetamine and alcohol withdrawal, physical dependence and tolerance; conversed and alcohol withdrawal, physical dependence and tolerance; neuroendocrine function, reproductive function, prolactin regulation, etress responsivity, physiology and pathology of mood and affect, immune contrion, gastrointestinal function. The hKOR variant allets is useful controlled thermining a susceptibility to pain in a subject and is useful for determining a therapeutically effective amount of pain reliever to a subject in order to induce analgesia in the subject. The hKOR variant allels is useful for determining a therapeutically effective amount of therapeutic agent to administer to a subject suffering from at least one addictive disease to treat the at least one additive disease.

The gane for hKOR is located on chromosome 8q11.2. The present sequence is the G36T allele of hKOR.

        The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in Gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR. (I) can be used to specific antibody against a particular GPCR, and in the production of specific contibodies. The peptides for GPCRs are useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, call responding immunological-related diseases, call regeneration-related diseases, e.g. AIDS, Alzheimer's disease, atheroseclerosis, bacterial, fungal, protosoman or viral infections, osteoporosis, cancer, cardiomyopathy, chronic and acute diseases, parkinnon's disease, multiple sclerosis, path, psoriasis, cancer, cardiomyopathy, chronic and schemer's disease, parkinnon's disease, multiple sclerosis, path, psoriasis, cancer, cardiomyopathy, chronic and schemer's disease, parkinnon's disease, multiple sclerosis, path, psoriasis, osteoporosis, rheumatoid arthritis, trauma, ulcers, or loss, epilepsy, asthma, tuberculosis, chemetoid arthritis, trauma, ulcers, or supportension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be completed and immunoassays and immunodiagnosis. AB242523 to AB242869 encode completed or present involved. The present in the present in versent involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                         The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chlorophenyl) (1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl)-1-methyl-2-(if)quinolinone, monitoring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient will respond. This sequence corresponds to a gene whose expression may be modulated in the presence of FTI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TGCCTGCCCCCAACAGCAGCGCCTGGTTTCCCGGCTGGGCCGAGCCCGACAGCAACGGC 120

polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as arrayer element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in the diagnosis and treatment regimens, drug discovery and development, toxicological and creatment regimens, drug discovery and development, toxicological and creatment regimens, drug cincoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia. Immunopathies e.g. Alzheimer's disease and Parkinson's disease. The present sequence represents a polynucleotide form part of the printed specification but was obtained in electronic format directly from USPTO at the printed specification but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360

This cDNA sequence comprises the coding region for human kappa opioid receptor (KOR, see AAW30297), a G protein-coupled receptor implicated in receptor (KOR, see AAW30297), a G protein-coupled receptor implicated in enucrotransmission. A novel method for selectivety activating a target cell (TC) comprises: (i) introducing into the cell a nucleic acid sequence (I) that expresses a G protein-coupled receptor (A) modified to be activated superiorly by a synthetic injand (RASE), and (ii) exposing the transfected cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular response associated with receptor activation. (A) has: (a) decreased binding affinity for a selected natural ligand of the native receptor; (b) binding affinity for selected natural ligand of the native receptor; (b) binding affinity for consistence (B); and (c) is activated by binding (B) aufficiently to produce the required cellular response. Also new are: (1) transgenic cells including heterologous (1); and (4) transgenic non-human animals expressing (A). Activation of (A) results, in vitro or in vivo, in cellular proliferation, or secretion of acillular product, correlatively few cells that are successfully transfected during gene correlatively few cells that are successfully transfected during gene therapy procedures. Other responses that can be regulated are cell migration and contraction, or pigment production. In transgenic animals, expression or stimulation of (A) is designed to develop cardiac arrhythmia, symptoms of bone diseases seizures, vascular contractions, dementia, neurodegeneration etc., for use as models of these diseases (Claimed). The transgenic animals are also used for production of improved food products (e.g. increased calcium content in eggshells or altered facilean ratios) or to control fertility or induce labour. A caltered facilean ratios or to control fertility or induced election of the contraction of the contraction of the contraction of the contraction of the contrac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CTGGCTTTGGCAGATGCTTTAGTTACTACAACCATGCCCTTTCAGAGTACGGTCTACTTG 360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                New nucleic acid encoding the human Kappa opioid receptor - useful in diagnosis and therapy, and for isolating receptor ligands and modulators.
                                                                                                                                                                                                                                                                           This sequence codes for the human kappa opioid receptor and was obtained from two overlapping cDNA fragments isolated from a human placental cDNA library. The fragments were amplified from the library using PCR primers based on the sequence of human genomic clones which hybridised with a murine delta receptor cDNA probe. Nucleotide probes derived from the kappa opioid receptor coding sequence are useful for diagnosis of neurological, cardio- vascular and psychiatric disorders associated with opioid receptors
